COMMITTED TO THE HIGHEST POSSIBLE STANDARDS IN CIVIL ENGINEERING

Evolving into the twenty-first century Lewis Civil Engineering has over twenty years experience in multi-million pound projects for the utilities industry as our enviable client list will testify.

Health and Safety in the workplace is at the very top of our agenda. We take meticulous care in ensuring that each employee is provided with the requisite skills and certification and that additional training needs are accurately identified where appropriate, ensuring that competence levels are optimised. Consolidating on these strengths and capabilities will remain our chief priority as a quality and competent servant to the utilities sector.

Our corporate foundations and business processes rely upon delivering quality to our customers through our approved and accredited systems registered to **ISO 9001:2000, ISO 14001 and OHSAS 18001**. Additionally we invest significantly in our prime asset - our people, a directly employed workforce complying with industry recognised qualifications such as the **Construction Plant and Skills Certification Schemes**.

Utilising cutting edge technologies in our plant, equipment and processes, together with sound logistics, safety management and performance standards, has instilled confidence in our customers to place their trust in our abilities to handle the largest of utility projects. Each of our projects requires a

dedicated and focused approach to environmental and community issues where there are often social costs and implications to evaluate.

We always consider the best methods and practicalities to minimise disruption, such as **trenchless technology**, and sensitivity to wildlife and woodland. Our experience in major water industry infrastructure replacement is second to none observing due diligence and respect to Government and industry

initiatives and guidelines, helping to make our environment a better place whilst enjoying enhanced product quality.

Fundamental to the company's growth and strategic development has been the acquisition of key relevant businesses enhancing practical capabilities and supply chain frameworks. We are committed to a **partnering** philosophy whereby we involve all parties to a project in the consultative process from inception to completion.

This synergy between client, designer, local authority, environment agency and contractor enables our projects to be consistently completed on time and within budget matching and often exceeding our customers expectations.
