

K'Nex Pipelines and Cables

ENVIRONMENTAL POLICY

K'Nex Pipelines and Cables are specialists in the design and installation of underground services for cable networks, ducting, pipelines and mains for sewers, gas, electricity (including construction of jointing or inspection chambers or manholes) and trenchless technology.

The management and all who work at K'Nex Pipelines and Cables are committed to the care of the environment and the prevention of pollution.

The company ensures that all its activities are carried out in conformance with any applicable legal requirements. The company seeks to minimise waste arisings, promote recycling, reduce energy consumption, reduce harmful emissions and, where possible, to work with suppliers who themselves have sound environmental policies.

K'Nex favours pipe-bursting techniques over traditional open-cut works, wherever possible, in order to minimise environmental impact.

An essential feature of the environmental management system is a commitment to improving environmental performance. This is achieved by setting annual environmental improvement objectives and targets which are regularly monitored and reviewed. The objectives and targets are publicised throughout the company and all staff are committed to their achievement.

In order to ensure the achievement of the above commitments, the company has implemented an environmental management system which satisfies the requirements of BS EN ISO 14001: 2004.

This Policy and the obligations and responsibilities required by the environmental management system have been communicated to all employees and persons working on behalf of the organisation. The Policy is available to the public on request.
